

OIL SEPARATORS FOR VACUUM PUMPS "EXHAUST FILTERS"

What let appreciate the oil separators we produce especially for their efficiency and for their long working life, both checked through deep tests, is the accuracy and the attention we pay to every detail.

We give a special care to the production process, checked step by step, by using advanced machineries and high quality raw materials. In fact we use corrosion resistant material able to resist to high pressures and temperatures; then, through a careful welding operation along with the use of bi-component resin, we ensure their full mechanic resistance.

In producing our separators we follow to the most common principles and building philosophy of the major vacuum pumps manufacturers, so it let our filters be fully interchangeable with the original ones. FILTER TECHNICS offers a wide range of oil separators for vacuum pumps which can satisfy most of the market requirements.
